Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group 1 claims 1-16 in the reply filed on 28 October 2005 is acknowledged.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takahashi et al. US 6,465,330 in view of Mahle et al. US 2005/0003633.

Takahashi et al. teaches the method of forming a semiconductor element in a wafer, forming a groove in the wafer by dicing along a dicing line, adhering an adhesive tape to the element side of the wafer, and grinding the backside of the wafer to at least the depth reaching the groove (see figs. 1-5 and related text).

Takahashi et al. does not disclose using a laser beam to treat the area the surfaces of the groove.

Mahle et al. teaches treating the area formed by a dicing process with a laser beam (see paragraph 0018).

Therefore it would have been obvious to one of ordinary skill in the art to use the method of Mahle et al. in the method of Takahashi et al. to treat the groove formed by

using a laser beam because it helps to remove defects formed the groove formation process.
